

Venere, la Stella del giorno

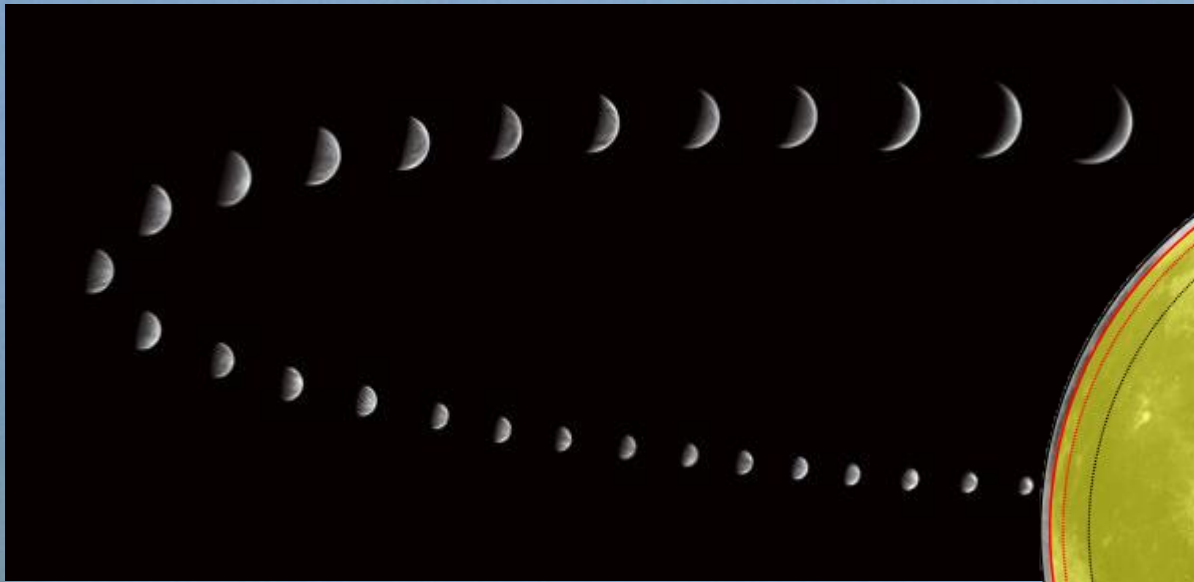

Ogni 19 mesi è
in congiunzione inferiore

- Pianeta **interno**

Lucifero,
Stella del mattino
&
Vespero,
Stella della sera

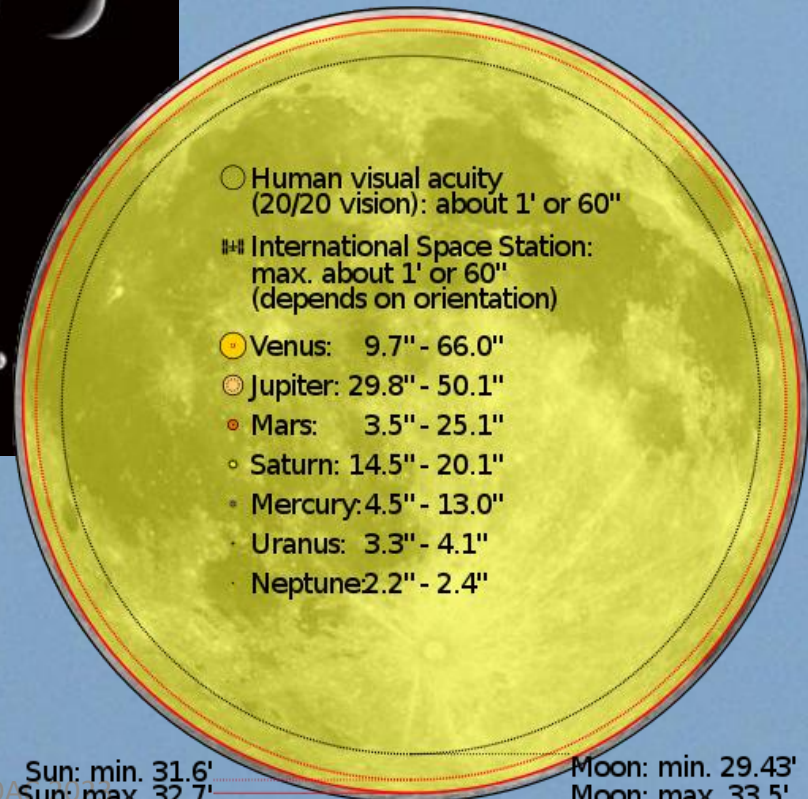

- Pianeta **più vicino**
 - ... apparentemente più grande

*«La madre degli amori
imita le figure di Cinzia»*

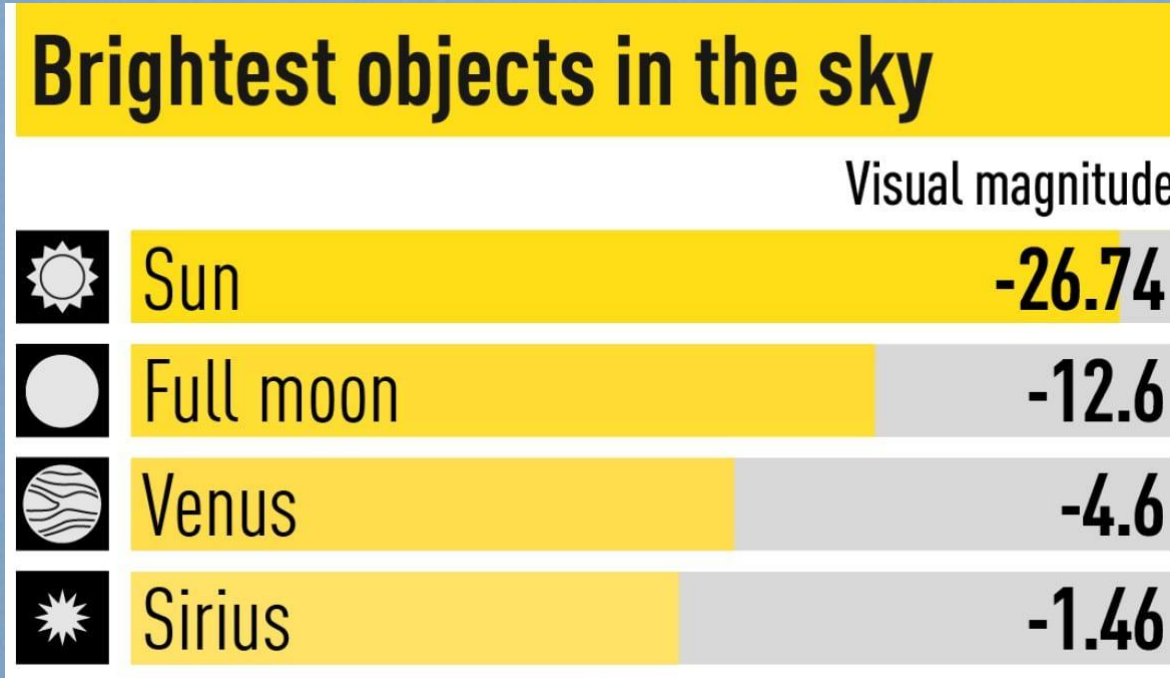

Galileo Galilei

XIII AstroUAN_Meeting - O/A
Sun: min. 31.6'
Sun: max. 32.7'

Moon: min. 29.43'
Moon: max. 33.5'

- III. Pianeta più luminoso

«... Venere, che pur spesse volte si vede di mezzo giorno, così piccola che bisogna aguzzare la vista e che pur poi nella seguente notte comparisce una grandissima fiaccola»

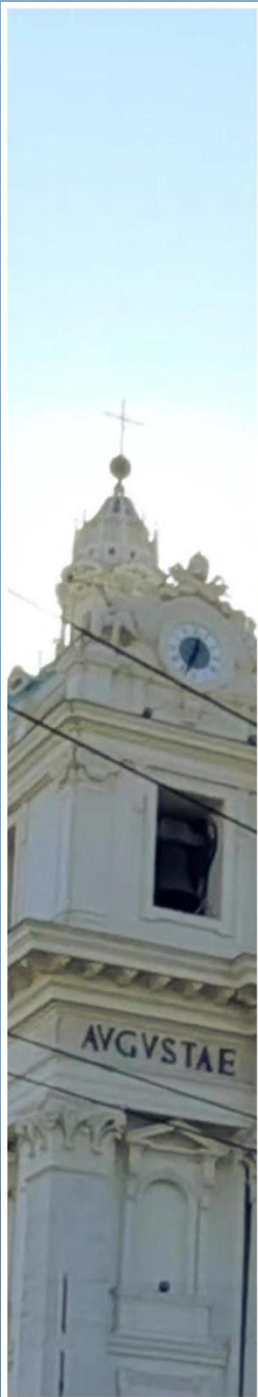

Stella del giorno

Pianeta con fasi

Pianeta apparentemente più grande

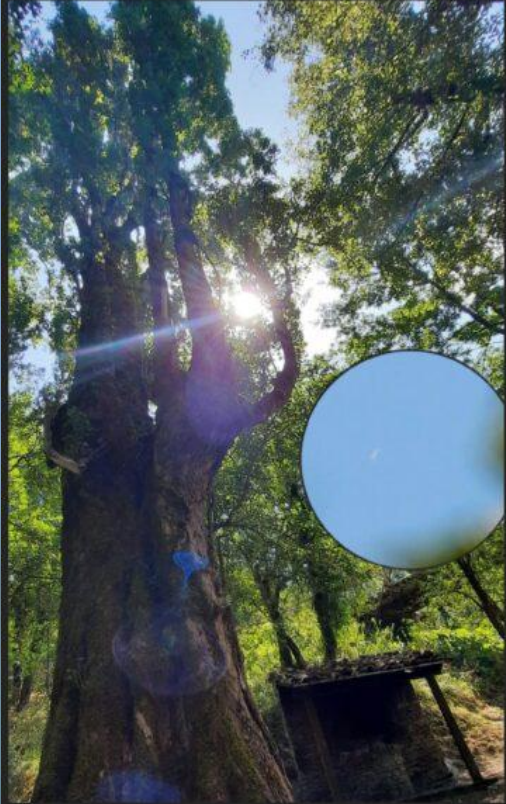

Senza “criniera / capelli”

nei pressi di Venere ...

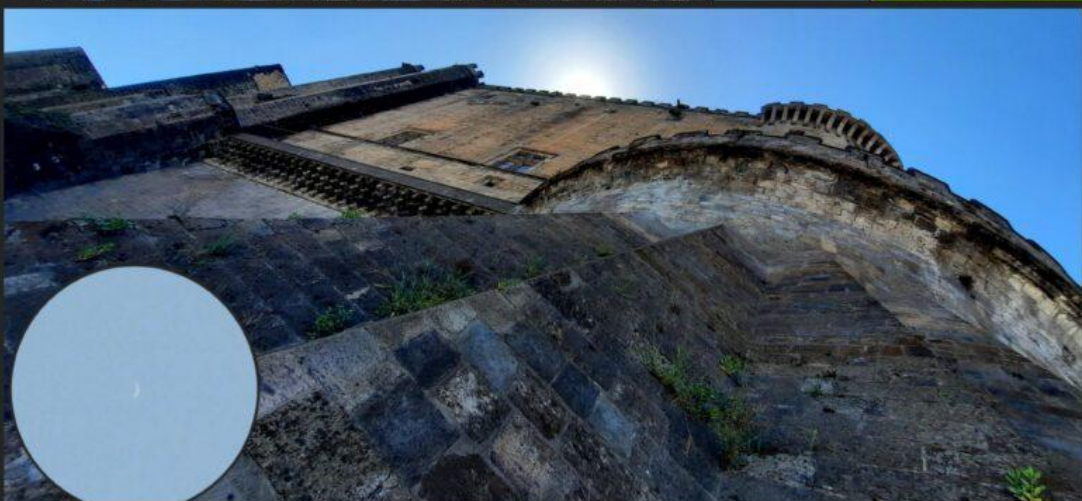

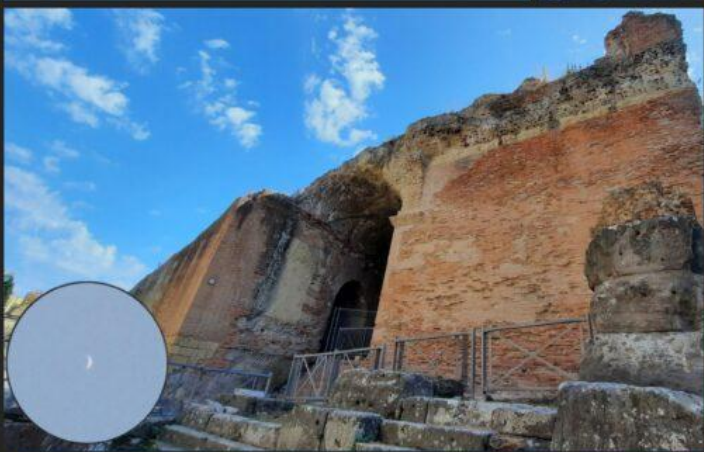

del Bosco di Capodimonte

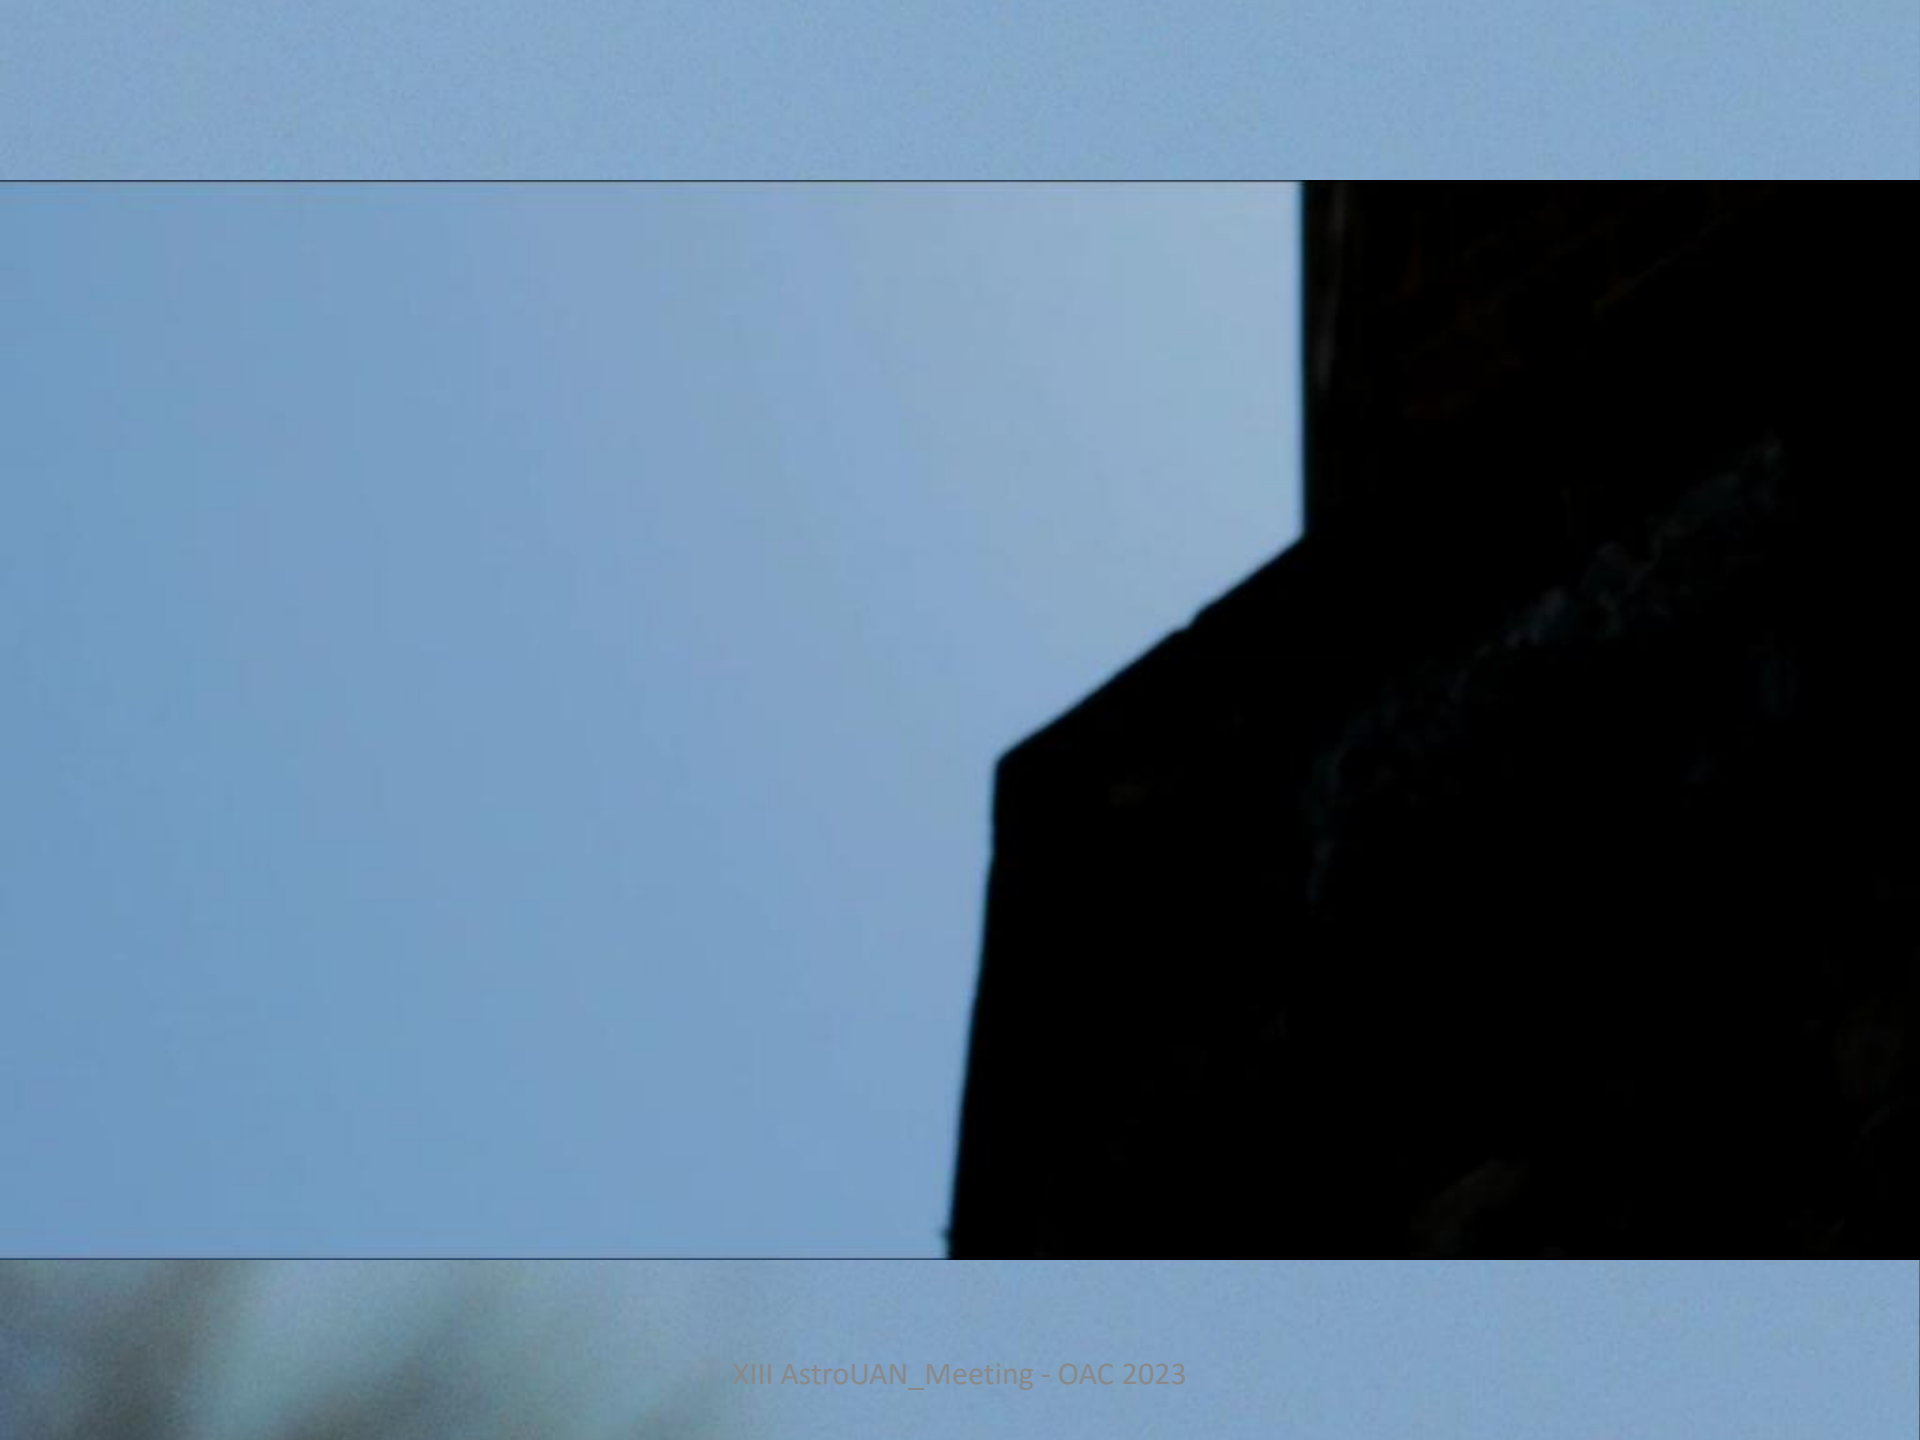

tra i merli

**Moon's
apparent
direction
of travel**

**Moon
phase 14%**

**Venus
phase 58%
reappearance 10:40 UT***

**Venus
phase 58%
disappearance 09:43 UT***

*** Times will vary by up to 15 minutes depending on location. Observe from at least 20 minutes before the stated times for safety.**
